

Installation Guide for Installing Liquid Galaxy on Ubuntu 26.04 LTS

Requirements

- Ubuntu 26.04 installed
- Username must be "lg" with home directory /home/lg
- Installation directory must be in home directory /home/lg (/home/lg/liquid-galaxy-ubuntu-lts-support) and all installation files are directly inside ubuntu-lts-support-gsoc2026

Steps

1. You need to be **lg** user, if not you need to create it using **useradd**.
2. Clone the repo at Home Directory lg user
 - a. `git clone`
<https://github.com/mahmouddmohammed/liquid-galaxy-ubuntu-lts-support> /home/lg/

Master and Slaves installation

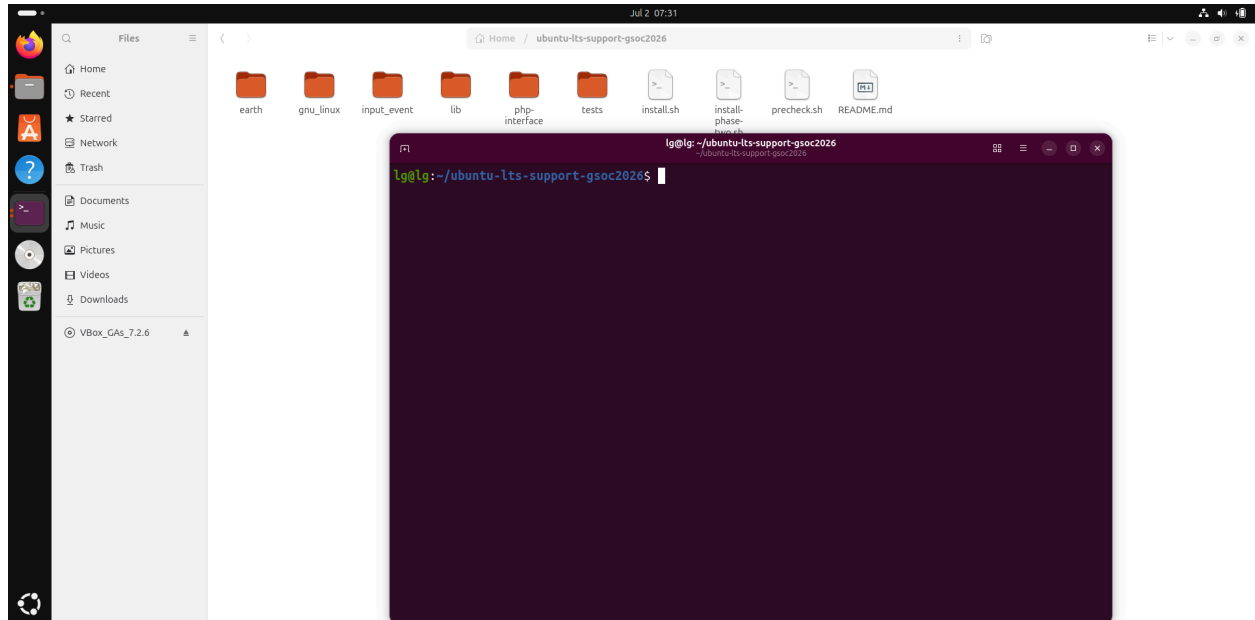

Phase One:

1. Write password
2. Enter information
3. Choose Lighdm when asking you choose between gdm3 and lightdm as display manager

Phase Two: It will run automatically after rebooting

Screenshots

OPEN TERMINAL HERE INSIDE THE INSTALLATION DIRECTORY

Execute `install.sh` script

```
lg@lg: ~/ubuntu-lts-support-gsoc2026
~/ubuntu-lts-support-gsoc2026

Press Ctrl+C now to abort.
-----
Machine id (i.e. 1 for lg1) (1 == master): 1
>>> This machine is the MASTER (lg1)
Save the IP ADDRESS of this machine: 10.0.2.15
Press any key to continue
Total machines count (i.e. 3): 3
Unique number that identifies your Galaxy (octet) (i.e. 42): 42
lg3 lg1 lg2

Liquid Galaxy will be installed with the following configuration:

IS THIS MACHINE THE MASTER : true
LOCAL_USER                  : lg
USER_HOME_DIR               : /home/lg
MACHINE_ID                  : 1
MACHINE_NAME                : lg1
TOTAL_MACHINES              : 3
LG_FRAMES                   : lg3 lg1 lg2
OCTET (UNIQUE NUMBER)       : 42
GITHUB_REPO_URL             : https://github.com/LiquidGalaxyLAB/ubuntu-lts-support-gsoc2026
EARTH_FOLDER                : /opt/google/earth/pro/
NETWORK_INTERFACE           : enp0s3
NETWORK_MAC_ADDRESS         : 08:00:27:f0:14:1c

Is it correct? Press any key to continue or CTRL-C to exit
```

ENTER PASSWORD OF “lg” User

```
lg@lg: ~/ubuntu-lts-support-gsoc2026
~/ubuntu-lts-support-gsoc2026

Machine id (i.e. 1 for lg1) (1 == master): 1
>>> This machine is the MASTER (lg1)
Save the IP ADDRESS of this machine: 10.0.2.15
Press any key to continue
Total machines count (i.e. 3): 3
Unique number that identifies your Galaxy (octet) (i.e. 42): 42
lg3 lg1 lg2

Liquid Galaxy will be installed with the following configuration:

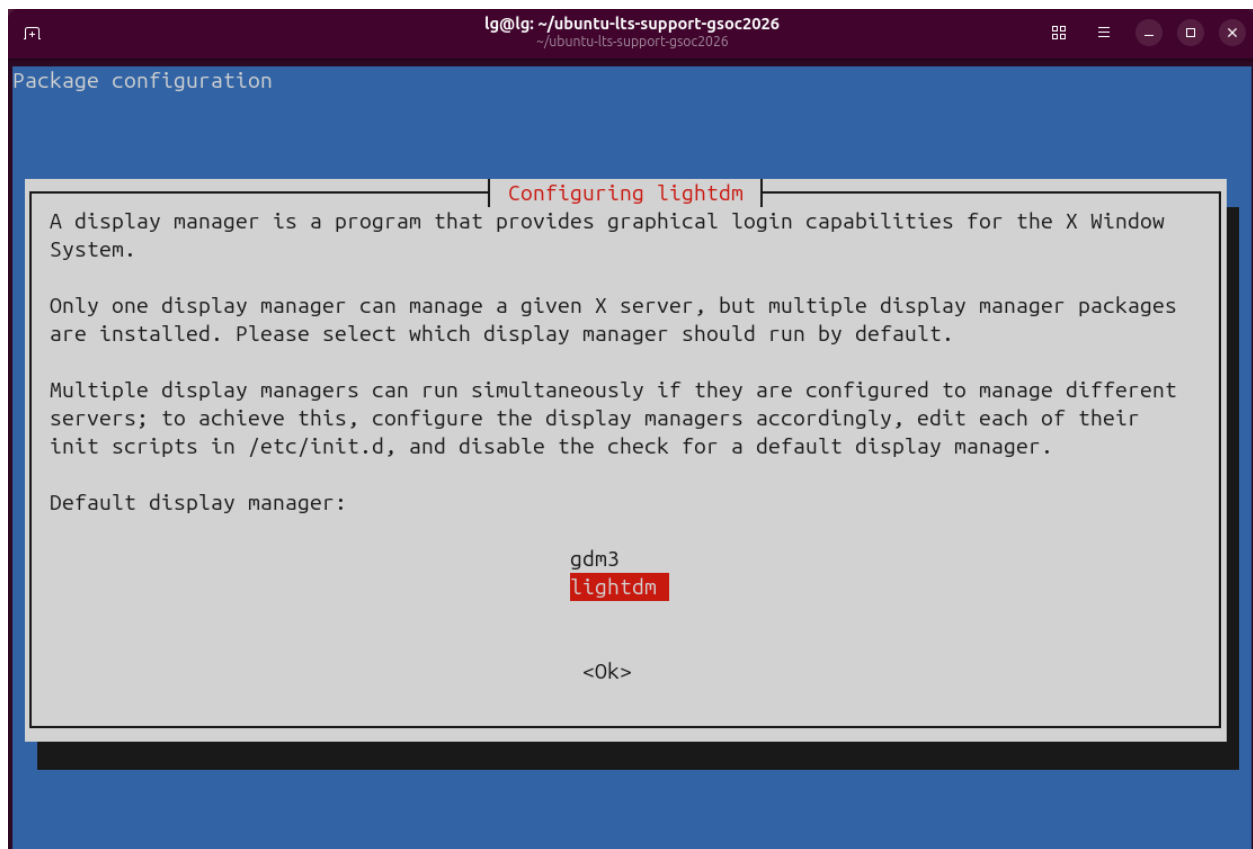

IS THIS MACHINE THE MASTER : true
LOCAL_USER                  : lg
USER_HOME_DIR               : /home/lg
MACHINE_ID                  : 1
MACHINE_NAME                : lg1
TOTAL_MACHINES              : 3
LG_FRAMES                   : lg3 lg1 lg2
OCTET (UNIQUE NUMBER)       : 42
GITHUB_REPO_URL             : https://github.com/LiquidGalaxyLAB/ubuntu-lts-support-gsoc2026
EARTH_FOLDER                : /opt/google/earth/pro/
NETWORK_INTERFACE           : enp0s3
NETWORK_MAC_ADDRESS         : 08:00:27:f0:14:1c

Is it correct? Press any key to continue or CTRL-C to exit

>>> Installing Needed Packages...
[sudo: authenticate] Password: ****
```

THEN LEAVE IT INSTALL NEEDED Packages

SELECT “Lightdm” then PRESS ENTER

At the end of phase 1 It will reboot

After rebooting: DON'T DO ANYTHING

Leave for 2 mins (It runs phase two installation as service in background, you will not see anything), After it finish, It will reboot

After rebooting, you should see that google earth opens automatically full screen and earth spinning

If it doesn't check logs:

cat /var/log/lg-install-phase2.log

SAME STEPS IN SLAVE EXCEPT IN

```
lg@lg: ~/ubuntu-lts-support-gsoc2026
lg@lg: ~/Desktop
lg@lg: ~/Desktop
lg@lg: ~/ubuntu-lts-support-gsoc2026 x

Machine id (i.e. 1 for lg1) (1 == master): 2
>>> This machine is a SLAVE
Make sure Master machine (lg1) is connected to the network before proceeding!
Master machine IP (i.e. 192.168.1.42): 10.0.2.7
Master local user password:
Total machines count (i.e. 3): 3
Unique number that identifies your Galaxy (octet) (i.e. 42): 42
lg3 lg1 lg2

Liquid Galaxy will be installed with the following configuration:

IS THIS MACHINE THE MASTER : false
LOCAL_USER                  : lg
USER_HOME_DIR               : /home/lg
MACHINE_ID                  : 2
MACHINE_NAME                : lg2
TOTAL_MACHINES              : 3
LG_FRAMES                   : lg3 lg1 lg2
OCTET (UNIQUE NUMBER)       : 42
GITHUB_REPO_URL             : https://github.com/LiquidGalaxyLAB/ubuntu-lts-support-gsoc2026
EARTH_FOLDER                : /opt/google/earth/pro/
NETWORK_INTERFACE           : enp0s3
NETWORK_MAC_ADDRESS         : 08:00:27:b2:85:24

Is it correct? Press any key to continue or CTRL-C to exit
```

You write **machine id**, **Master machine IP** (you saved from installation on master), **Master machine password** (you who know your password), **Total machines count** AND **octet number** ⇒ exactly as set in installation of Master

Voila! That's it.
